

ESSAY

EGYPTIAN LEGACIES TO OUR DAYS: MEDICINE, WRITING, ARCHITECTURE, MATHS, ASTRONOMY.

Egyptians have elaborated and invented different things that until today are recognized, Egyptians bring us Medicine, Writing, Architecture, Maths, Astronomy, among others. The great temples, monuments of ancient Egypt, their calendar, their unique cuneiform writing, and the amazing medicinal methods continue to amaze people in the modern day, questions arise about how the Egyptians were able to invent, elaborate, construct, and design those things that we know today.

First, let's talk about astronomy in the ancient civilization. Egyptians studied astronomy, taking measurements of the stars, these help them to construct the sun temples, let's continue with architecture and agriculture. Egyptian people construct a lot of fascinate structures such as the pyramids, they also invented an irrigation system, that bring water through the Nile river, so let's see about medicine. The Egyptians have been recognized to use honey as medicine also they use different tools to cure injuries. Egyptians were the first people to invented language and writing, they use mostly papyrus, that is a type of paper from the papyrus plant. Also Egyptians use pictures and pictograms as a form of writing.

As you can see ancient civilization has a lot of interesting histories and things to explore, and is very important to know about all the inventions that Egyptian people develop, their culture, and how was their day to day in the civilization, how was the organization and the social pyramid, the mumification process how was the Afterlife, embalmmnt process, there are a lot of themes and topics that we can search and the limit is your imagination.
